

The new WaterProfi Wand Nozzle, Safe Assembly of Hoses and Information about the new building

The new WaterProfi Wand Nozzle: Extensive watering – comfortable and easy

We have extended our water product range with the high quality WaterProfi Wand Nozzle. This allows a targeted and extensive watering with minimal effort and maximal comfort.

The **LÜDECKE** WaterProfi Wand Nozzle distinguishes itself from others through its sophisticated dispensing system through a patent protected slide valve technology. The water jet is continuously adjustable by simply pushing the sleeve on the handle. The sleeve stays at the settled position and relieves the hand during continuous spraying. High-quality materials make this product incredibly strong and durable. Due to the comfortable surface material and the ergonomic design, the Wand Nozzle fits comfortably in the hand even after an extended working period.

Thanks to its modular construction, the **LÜDECKE** WaterProfi Wand Nozzle can be individually assembled at any time. A wide variety of shower heads, extension tubes as well as connection types are available. Further information as well as the complete **LÜDECKE** water range can be found in the new [Info-Flyer](#) and at www.luedecke.com.

Safe Assembly Of Hoses With LÜDECKE As Developing Partner

Not only high quality coupling systems, **LÜDECKE** also offers professional advice for safe assembly of hoses.

With your desired hose line we will advise you to choose the right fitting and correcting assembling method. As an experienced manufacturer of high-quality fittings, you benefit from our know-how and our superior testing possibilities.

In addition, we employ an accredited hose assembly inspector and tester. When the hose line is complete and assembled, we test it under conditions as close as possible to realistic operation conditions, whereby a reliable statement about the suitability for the intended application can be made. Due to our complete in-house production we are able to develop, produce and test a customized solution – fast and flexible.

Convince Yourself: For more information please see our new [Info-Flyer](#).

Work in progress: the new LÜDECKE building is taking on shape

Upon a concrete planning phase last year, the major construction project of the new **LÜDECKE** building began at the Amberg headquarters. Since then, on over 3,000 sqm., modern production and assembly halls, as well as a comprehensive equipped customer training center, including a cafeteria have been erected.

The first production hall has already been opened for production. Five from the planned 17 machines are currently in operation. Even the second production hall is in the stage of opening soon. Parallel to this, the new Goods-in Department with a direct road link is already successfully in use, while the shelving system for the raw materials are being constructed in the warehousing area. As expected, the assembly hall will also be completed on schedule, which will soon be equipped with an automated laser engraver, a thread coating machine, as well as assembly workbenches for quick connect couplings. To all this, the interior decorations for the future cafeteria and the training center has started.

The completion of the new **LÜDECKE** building is scheduled for September 2016. Until then, take the opportunity and get an exclusive impression of the current construction progress via the [live webcam](#) on our website.
