SNOW MASTER High-Pressure Quick Couplings

Instruction manual

SNOW MASTER coupling systems guarantee an optimum safety in operation when supplying your installations with water under extreme usage conditions.

Attention:

Make sure to use corresponding type sizes and adequate hoses.

Make sure to use the right stem profile for the chosen hose assembly method.

The couplings and plugs have to be tested for damage and abrasion before and during use. If there should be any defects, the fittings mustn't be used anymore.

The assembly of hose and couplings has to be done by experts duly. It has to be guaranteed before assembling resp. disassembling the couplings that there is no pressure

inside the line.

During the application always use the handle protection to avoid accidental opening!

Remove the handle protection only when there is no pressure in the line!

Technical details:

Max. working pressure 60 bar
(type size 250 max. 40 bar)

Medium: water
(temperature of medium: -5°C - +95°C)

Please use only original spare parts for repair or replacement!

Warning:

The wrong choice or improper use of **SNOW MASTER** couplings and accessory at high working pressures can lead to serious damage to property and persons.
