

# Innovative coupling systems and fittings for cleaning applications in the food industry, original series ES DN 7,2 and availability of the master data

## Innovative coupling systems and fittings for cleaning applications in the food industry

In collaboration with the meat producer Wolf and branch specialist Altmann Industrietechnik, **LÜDECKE** developed an innovative system for the thorough and efficient cleaning in the food industry. The firms are, concerning the hygienic standards, highly oriented towards the strict guidelines of the IFS food certification.

The system consists of different fittings (screwing/ quick connect coupling system) which will be especially adapted to the hoses used for cleaning applications. Due to the usage of stainless steel and special seals, all products meet perfectly the strict requirements in the food industry. Dirt accumulation can be prevented because of the smooth surfaces and the free passage. The whole solution provides a safe, lasting and dense assembly of the hoses which ensures long lifetime and easy handling.

Because of this cooperation, **LÜDECKE** and Altmann could reach a leading role in the field of hose technology for cleaning applications in the food industry.

For more information, please see our [brochure](#).

## The Original – Quick Connect Coupling Series ES DN 7,2 by LÜDECKE: Proven every year millions of times for decades.

With its Quick Connect Coupling System ES DN 7,2 **LÜDECKE** offers a proven, high quality and robust product for decades.

**LÜDECKE** attaches highest importance on a remaining solid design, which means there won't be any changes in the material quality. The coupling is characterized through a complete vacuum suitability despite a low connection force compared to every of the compatible models. The sleeve design protects the coupling mechanism from dirt. The series ES DN 7,2 contains high-class seals (no reduced O-ring seals) which guarantees a tight plug even on extreme tilting moments. The universal coupling is available in brass MS 58 (blank or nickel-plated), stainless steel as well as with free passage, single or double shut off. Various connection types offer highest flexibility for a variety of applications.

Further information can be seen in our pneumatic program ([brochure](#), [main catalogue](#)).

## Now available at LÜDECKE: comprehensive master data and images of the complete standard catalogue program

With immediate effect, all master data and images (with and without measurements) from our complete standard program in German are at **LÜDECKE**'s disposal for all retail partners. The English data will be available in the upcoming weeks. All data can be requested as Excel or BMEcat-output format.

For any remaining questions to the data transmission please ask your [contact person](#) at **LÜDECKE**.
